	Issue	Page
PROBLEM 21: J. J. O'Sullivan, Santa Monica, Calif., inquires about what distribution models other than the Poisson might be appropriate for fitting observed distributions of the frequency of occurrence of contaminated tablets in samples. These observed data consistently exhibit longer tails than the corresponding fitted Poisson model gives.	Jan. 1958	29
PROBLEM 22: E. G. Field, Atlanta, Georgia, asks this department to publish an explanation and derivation of the d_2 constant similar to the informative explanation published in the December 1956 issue for the constant c_2.	Jan. 1958	30
Suggested Solutions		
PROBLEM 20 (April 1957). The editors provide a solution to this problem, as well as exploring some further implications of it. Acknowledgement is given to a long list of contributors who submitted solutions to this problem, and reference is made to the paper by C. H. Springer in the July 1951 issue of *Industrial Quality Control* which treated precisely the problem proposed to this department as No. 20.	Jan. 1958	30
PROBLEM 17 (Dec. 1956). Mary Torrey, Bell Telephone Laboratories provided a solution to this problem in response to a request by the departmental editors.	Jan. 1958	31
